**As we know a vaccine to protect us from coronavirus has been made. But** distribution of the vaccine is very inefficient, can you build a more effective vaccine distribution system?
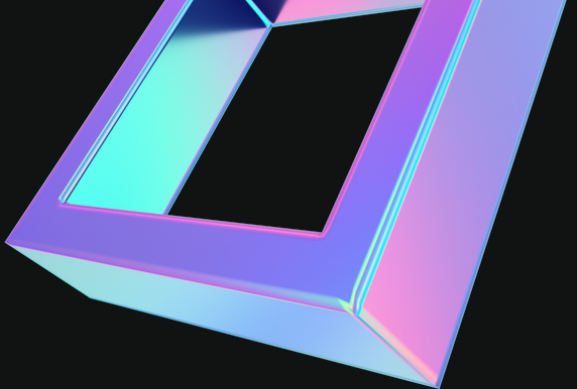

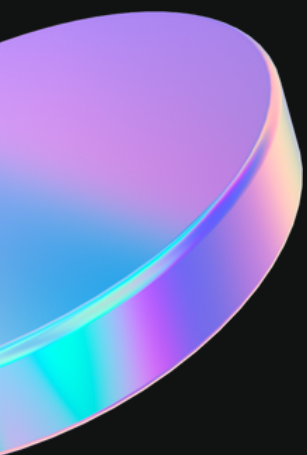

WHAT OUR PROJECT IS ABOUT

We have created a website that will allow the people to register themselves for covid 19 vaccination drive at the vaccination camps set up the government in their locality. They can chose the best available date and time slot. After their registration they will get an appintment letter through an automated mail.

As a person registers for vaccination, his or her details will be stored in a database which the central government, state government and the vaccination camps will have access to.

Within the database , we will have 1 table for central government and one table each for state government.

TABLE FOR CENTRAL GOVERNMENT

NAME OF STATES	NO. OF DOSES REQUIRED
DELHI	200

TABLE FOR EACH STATE GOVERNMENT
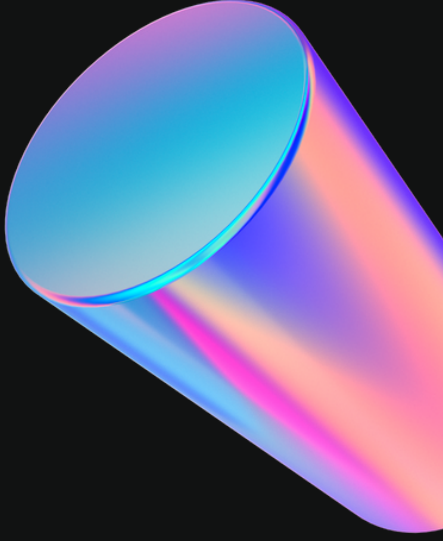

NAME OF LOCALITY	NO. OF DOSES REUIRED
CIVIL LINES	20

NEXT

Problems it will solve

- improper vaccine distribution

- large crowds at vaccination centres

- overavailibility of vaccines at some places while shortage of vaccines at other places
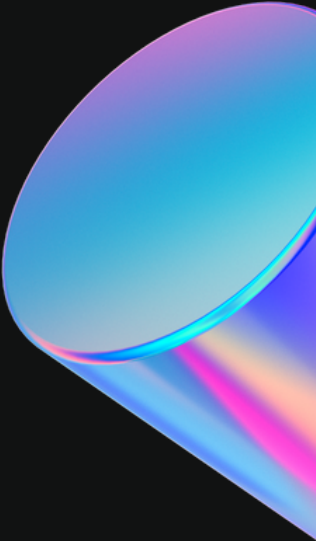

TARGET AUDIENCE

GENERAL PUBLIC

ALL THOSE PEOPLE WHO WANT THEM TO BE VACCINATED BUT CANNOT DO SO EITHER BECAUSE OF SHORTAGE OF VACCINES IN THEIR LOCALITY OR BECAUSE OF THE FEAR TO GET INFECTED IF THEY GO TO THE CROWDED VACCINATION CENTRES

GOVERNMENT BODIES

GOVERNMENT CAN USE OUR PRODUCT TO KEEP A RECORD OF VACCINE DEMANDS AND THEREFORE CAN SUPPLY ACCORDINGLY
